(57) **ABSTRACT**

A multibox for vehicles includes a housing, a sliding plate, a cover and a knob unit. The housing has a receiving space for receiving articles. The sliding plate is disposed around the housing to translate forward and rearward by a force of a spring of the housing. The cover finishes a front surface of the receiving space of the housing and is supported on the sliding plate by a hinge structure through hinge arms thereof. The cover is rotated upward and downward by a force of a spring. The knob unit is disposed at one side of a front surface of the housing to lock or unlock the housing and the cover through a pushing operation. The multibox is opened and closed by translation of the sliding plate and rotation of the cover.
